Advanced Generation Severe Service

Silver Alloy Battery Line *Reliable Performance for Extreme Applications!*

Like you, emergency service providers depend on their vehicle's performance, but crowded engine components, stop-and-go traffic, even cruising on a summer afternoon can lead to excessive underhood temperatures.

CARQUEST'S Advanced Generation battery line is specially **engineered for severe service and high**

temperature applications. The silver lead alloy of the Advanced Generation battery withstands these conditions and delivers **maintenance-free high performance and longer life.**

From coast to coast, CARQUEST'S Advanced Generation batteries provide plenty of cranking power for hot or cold weather starts.

FEATURES

- **Patented Silver Lead Alloy**
- Maintenance-Free
- Full-Frame Grids
- Heavier Grid and Plate Design
- Special Negative Envelope Separators
- Added Electrolyte Reservoir
- Ultra-Pure Electrolyte
- Over 250 quality checks
- Made in the U.S.A.

BENEFITS

- **Provides extended life** for hot climate and severe service conditions.
- Reduce water loss when compared to hybrid and traditional alloys.
- Slow plate growth through reinforced sides.
- Provides longer life with twice the wire diameter of normal grids.
- Reduce short circuits caused by plate shedding and growth.
- Retards plate dry-out for longer maintenance-free life.
- Increases maintenance-free performance.
- Ensure highest quality, performance, and reliability.
- Your assurance of quality.
